Variables from the National cause-of-death register, 1961-, in Karma

The register for cause of death covers all deceased persons who at the time of death were registered in Sweden in the year they died, whether the death occurred within or outside the country. The statement does not include stillbirths, persons who died during a temporary stay in Sweden or asylum seekers who have not yet obtained a residence permit. Swedish immigrants, who are no longer registered in Sweden, are also excluded.

The cause of death register contains data from 1961 and is updated annually (2 year lag). There is also a historical death records for the years 1952-1960. The diagnoses in the death registry are coded according to the international version of the ICD and not the Swedish one.

For more details, see

<https://www.socialstyrelsen.se/statistik-och-data/register/dodsorsaksregistret/>

dodsdat – date of death
